
OPT-FFT (CO96/R70): testing E[X] = 0.5, alpha = 0.05
Average log wealth over 100 trials; all paths continue after rejection; shading: ±1 SE
Mean gap above the null = 0.2
mean = 0.7
Individual-test threshold
Average log wealth
Observations
Mean gap above the null = 0.1
mean = 0.6
Individual-test threshold
Average log wealth
Observations
Mean gap above the null = 0.05
mean = 0.55
Individual-test threshold
Average log wealth
Observations
Mean gap above the null = 0.025
mean = 0.525
Individual-test threshold
Average log wealth
Observations
100 trials per alternative; N = 10,000; bars show one standard error
Mean above the null
Mean min(τ, N)
Mean gap above the null (difficulty increases to the right)
